

Camdenville Park Upgrade Works – Asbestos Management

Dear resident

Works for the upgrades to Camdenville Park will commence in the coming weeks and site establishment activities are now well underway.

Camdenville Park has a past history of industrial uses and is known to have been historically filled with building and demolition waste materials that includes fragments of bonded asbestos containing materials. These materials remain at depth in the soils beneath the surface of the park.

The upgrade works will require the removal of the existing grass cover and some earthworks to reshape parts of the park. It is expected that these works may uncover some bonded asbestos containing materials present in the soils underlying the Park. The disturbance of these materials during the earthworks will be completed to ensure that the community will not be exposed to the asbestos.

For information on asbestos please visit www.asbestos.nsw.gov.au

Protecting Health and Safety

The safety of the community, site workers and the environment is our highest priority during the upgrade works. Inner West Council, and its contractor, will carry out this work to the highest health and safety standards.

During this work you will see signs erected on the construction site fencing to notify of works that may disturb the bonded asbestos in soils. Air monitoring will ensure that strict quality limits are met and that there are no risks to the surrounding community.

When works that disturb soils that contain fragments of bonded asbestos are being completed a range of measures will be implemented to prevent dusts being generated. Workers in the asbestos works areas on the site will wear coveralls and masks. Protective clothing is not needed for workers outside of the designated asbestos work areas.

Once the earthworks are completed, the next stage of works to construct the new surface coverings for the upgrade works will commence. This work will involve the covering of the existing site soils and allow asbestos controls to be removed.

All works will be undertaken to ensure air quality outside of the worksite is safe and will not pose a risk to the health of the community.

Feedback and more information

Construction of the upgrades to Camdenville Park are being structured to minimise impacts to local residents and businesses.
