

It was an ordinary spring afternoon, the flowers were blooming and three friends laughed and ran around a meadow. Marie, Alice and Jack had been friends for a long time and they were together almost every minute of the day. Making the most of the bright sun they stared at the clouds trying to make out figures. When suddenly the sky went dark. The sun had disappeared and had left the three friends panicking. "Where has the sun gone?" asked Jack as he fiddled with his jacket zipper. [Jack does it when he's scared] Alice and Marie were no doubt feeling the same and had shuffled closer together without thinking. "Well I don't know about you two but I have a feeling if we work together we might be able to get to the bottom of this," said Alice. With that the three friends made a decision and set off with a hope they will save the earth and find the sun.

As they walked they realised that the place they should go to first would be the observatory. Alice, Marie and Jack slowly approached it and came to stand in front of the round blue observatory. There was no time to waste and on the count of three they pushed open the creaky doors and went in. The first thing they saw was a girl. The first thing they heard was the girl screaming. The first thing they did was scream. This went on for a while until the girl asked what they were doing here. "We were going to find out why the sun has disappeared." said Marie organising herself after the fright. The girl said that she was here for the same reason and after introducing herself they decided to figure out their problem. As they climbed the winding stairs they bumped into a professor who asked them what they thought about the solar eclipse. "What is a solar eclipse?" asked all four of them. The professor explained the event that had taken place, then they went outside to be greeted by the sun in its rightful place. After this moment the three friends got a new addition- the girl [Charlie] was spending almost every minute of the day with them and she fitted in just right with their desire to solve problems. They got on together like four peas in a pod.
